

## Uso de API's

Una API es un mecanismo que permite la conexión entre dos componentes de software con la finalidad de que se comuniquen entre sí mediante definiciones y protocolos. Por ejemplo, la aplicación meteorológica en un dispositivo utiliza una API para mostrar al usuario las actualizaciones meteorológicas.

Para utilizar una API se deben seguir los siguientes pasos:

1. Obtener una clave de API. Esto se hace mediante la creación de una cuenta verificada con el proveedor de la API.
2. Configurar un cliente de API HTTP. Esta herramienta permite estructurar fácilmente las solicitudes de la API mediante las claves de la API recibidas.
3. Si no tiene un cliente de API, puede intentar estructurar la solicitud por su cuenta en su navegador. Para ello, consulte la documentación de la API.
4. Una vez que se acostumbre a la nueva sintaxis de la API, puede comenzar a utilizarla en su código.

# Prueba en Postman

The screenshot displays the Postman application interface. At the top, the navigation bar includes 'Home', 'Workspaces', 'API Network', and 'Explore'. The main workspace is titled 'GET Visualize Bar Chart' and shows a request to 'https://pokeapi.co/api/v2/pokemon/rayquaza/'. The response is visualized as a bar chart, and the 'Send' button is visible. Below the request bar, tabs for 'Params', 'Auth', 'Headers (7)', 'Body', 'Pre-req.', 'Tests', and 'Settings' are present. The 'Body' tab is active, showing the JSON response in 'Pretty' format. The response includes details about Rayquaza's abilities, base experience, forms, and game indices. The status bar at the bottom indicates a 200 OK response with a 359 ms response time and 260.57 KB of data.
